Culmination Project Development

What is this game?

The game will be made with work in the Construct 3 engine.

The game will feature levels where the objective is to reach the goal.

There will be enemies that will appear on screen that you must use your attack moves to defeat them.

Why this project?

Inspiration: Super Mario and Street Fighter

Purpose: blending mechanics of both genres to create a new game.

Having different character archetypes to choose from.

Purpose:

Characters can switch

Different ways to tackle enemies

Using fighting game moves in a 2d platform

The Fighting Styles

Spearwoman: jabbing and aerial attacks

Viking: slashes and projectile attacks

Control buttons:

C button: Switch character

X button: Special attack

Z button: Normal attack

Challenges:

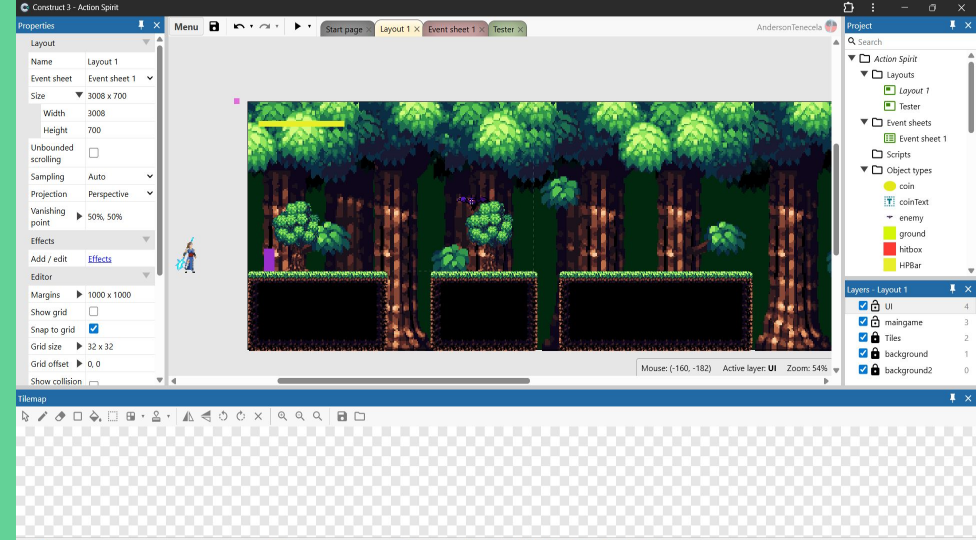

Restructuring the scope of this game

Programming the enemy

Programming switching characters on screen.

Enemy colliding with the player/taking damage.

Importing animation frames correctly.

Timeline:

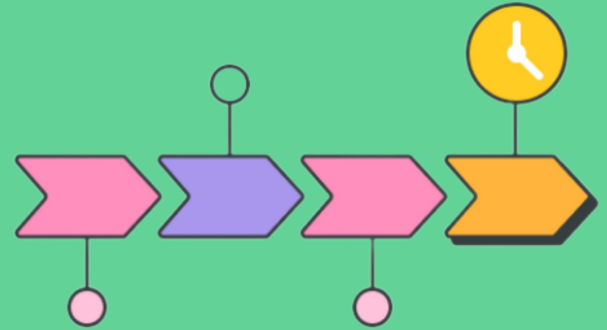

Early March: Research and testing Construct3

Late March: creating the platform level and inserting background

Early April: character and enemy animation frame importing

Late April: hitboxes and program character switching.

May: level spawn and enemy colliding

Future Timeline and Goals:

I want to add more character archetypes that can allow for more character switching.

Expand the level and add things like goal and more enemies.

June-August: add more fighting styles, playtesting, more attacks.

September: add more enemies.

October-November: level expanding and adding more improvements like more platforms. Add metroidvania elements?
